*A few genuine Testimonials recently received by
G. W. RILEY—unsolicited.*

NEWPORT, ISLE OF WIGHT.

DEAR SIR,

The Summer House arrived safely, and, having now put it up, I beg to enclose cheque in payment for same, the receipt of which please acknowledge. At the same time, I may say that I am very well pleased indeed with what you have done, and the Summer House is exactly what I require and is most prettily made. My builder is so pleased with it that he has asked me to request you to send him one of your Catalogues.

I thank you also for the prompt way in which you carried out the order. You promised to complete it in a fortnight, and to the very day you had it upon the truck, notwithstanding that the Easter holidays intervened.

Yours faithfully,

J ——— E ———.

Mr. G. W. RILEY,
81, Dulwich Road,
Herne Hill, S.E.

BOWES PARK, N.

DEAR SIR,

I enclose cheque in payment of account for Summer House, which appears very satisfactory.

Yours truly,

W. C ———.

Mr. G. W. RILEY.

A

STROUD,
GLOUCESTER.

DEAR SIR,

Summer House to hand, and fixed all right; had no difficulty. Quite satisfied with it. Will send cheque to-morrow.

Yours truly,
H. J. B——.

Mr. G. W. RILEY.

FREDWER,
ABERDARE.

SIR,

The Summer House arrived safely. I have had it put up and am perfectly satisfied with it.

Yours, &c.,
A. E——.

G. W. RILEY, Esq.

WOLVERHAMPTON.

DEAR SIR,

Herewith I have pleasure in enclosing cheque in payment of enclosed invoice. The goods came to hand yesterday, and when erected will, I think, give satisfaction.

Yours faithfully,
EDW. T——.

Mr. G. W. RILEY.

Testimonial from LORD CLAUDE HAMILTON.

23, LOWNDSE SQUARE,
Nov. 27, 1892.

Mr. RILEY,

I enclose cheque for the Rustic Summer House, &c., supplied. All the articles are exceedingly well designed and finished, and I consider your charges very moderate.

I am,
Yours truly,
CLAUDE J. HAMILTON.

GLANDOVEY,
N. WALES.

Mrs. J—— is enclosing a cheque for the Summer House received from Mr. G. W. RILEY. It is put up and is most satisfactory.

TORQUAY,
DEVON.

Mr. S—— has received the Bridge, and is pleased with it; it is just what he required. He encloses a cheque for the same.

Mr. G. W. RILEY.

ONELOW CRESCENT, W.

Mr. G. W. RILEY,

The Summer House has arrived at Worthing, and I am very pleased with it.

J. WILLS
(WILLS & SEGAR).

SUDBURY,
DERBY.

Mr. RILEY,

The Seats have arrived, and I am very pleased with them. enclose cheque for amount.

Yours faithfully,
T. G. K——.

LONDON, CHATHAM, AND DOVER RAILWAY,
VICTORIA STATION, S.W.

DEAR SIR,

I am happy to enclose cheque for the Summer House, with which we are much pleased, and we expect it to be as serviceable as it is ornamental.

With thanks for your promptitude,

Yours truly,
G. R. R——.

Mr. G. W. RILEY.

HOUSE OF LORDS.

DEAR SIR,

The Summer House, &c., forwarded to Birchington, arrived safely, and with your full instructions has been erected and is much admired. I enclose cheque.

Yours, &c.,

M. A. M——.

MR. G. W. RILEY.

HARROGATE,

YORKS.

DEAR SIR,

The Summer House arrived this morning in good condition. I am pleased to say that I am more than satisfied with it. So well arranged that I was able to put it up in about half-an-hour myself. I beg to enclose cheque to settle account.

Yours respectfully,

D. T——.

MR. G. W. RILEY.

Barford and Perkins' Water-Ballast Garden Rollers.

Width and Diameter.	Weight Empty.	Weight Full.	Price.
Inches.	cwt. qrs. lbs.	cwt. qrs. lbs.	£ s. d.
18 by 18	2 2 0	3 2 0	3 0 0
21 - 21	3 1 0	5 1 0	4 0 0
24 - 24	4 1 0	7 0 0	5 0 0
27 - 27	6 2 0	10 0 0	7 0 0
30 - 30	8 2 0	13 2 0	10 0 0
36 - 36	14 2 0	23 0 0	16 0 0

An ordinary 24-inch Garden Roller weighs about $4\frac{1}{2}$ cwt., whereas the new patent 24-inch when loaded weighs 7 cwt., and other sizes in proportion. The latter therefore is not only vastly more effective, but is really cheaper than any other kind, and the advantage of having in one Roller either a heavy or light implement at pleasure must be obvious to everyone.

N.B.—The larger sizes of these Rollers can now be supplied with Double Cylinders. Prices—21-in., 15s.; 24-in., £1; 27-in., £1 10s.; 30-in., £2; and 36-in., £2 extra. There is a corresponding increase in weight.

For keeping Lawns and Tennis Courts in perfect order these Rollers are invaluable, and they have been adopted by a very large number of Tennis and Cricket Clubs. When the ground is soft they may be used empty, and in dry weather, when all others are useless, they can be filled and worked to advantage. Their transport weight being but little more than half their effective weight, they are specially adapted for export.

BARFORD & PERKINS are the largest Manufacturers of Rollers in the United Kingdom, many thousands of their make being in use.

Patent "Universal" Water-Ballast Tennis Ground Rollers.

For Pony or Manual Power, with rounded edges.

This is a most useful "Combination" Roller, adapted for rolling Lawns, Tennis Grounds, Gravel Walks, &c., &c. The light iron tubular shafts can be removed in a few moments, and the handle substituted.

The "Bowdon" Lawn Markers. (Mills' Patent, No. 6,790. 1885.)

Sole Licensees—BARFORD & PERKINS.

The "Bowdon" is the simplest, handiest, and best of Lawn Markers. It has no loose parts, no secondary wheels, no bands, no pulleys or brushes; the one front wheel performs all the functions of those obsolete complications, taking up the whitening from the very bottom of the tank and printing it direct on to the lawn. The double handles are of great assistance in steering, and are incomparably better than a single handle. A clearer, stronger, and more lasting line is printed at the first impression than by going two or three times over the same ground with other markers, and a thicker solution of whitening can be used. The tank will hold more than sufficient whitening to mark out a full-sized court. The machine can be wheeled about a garden or tennis court without marking or spilling by simply depressing the handles, and can be used by a child without any instructions whatever, and without the slightest fear of derangement.

Improved pattern, with iron marking wheel, price 21/- Makes a line 1½ inches wide.

Barford and Perkins' New Beatrice Lawn Mowers.—For lightness of draught the "BEATRICE" cannot be excelled, and it will cut the longest and heaviest grass. It can be used with or without grass collecting box, and will be found to be a thoroughly well-made and efficient lawn mower at a very low price. All the wearing parts are interchangeable, and the machine is so simple in construction and light that a lady or boy can work it. A large number of these mowers were in use last season and gave great satisfaction.

WITH WOOD HANDLE.

These machines can be fitted with long double wrought-iron Handles at 2/6 each extra.

Barford & Perkins' New Lawn-Edge Clippers.

These little machines have been well tested in actual work and have proved themselves to be very efficient. All other edge cutters work one way only, these cut both backwards and forwards, which is a great advantage, especially when the inside edges are being done.

The operation of trimming the edges with hand-shears is very slow and tedious; by using this clipper a great saving in time is effected, and the lawn will have a far better appearance.

Price 15/- each.

Green's Water Barrows.

These implements are extremely useful in conveying quantities of water near to where it is required, thus saving much time in watering gardens, &c. The tubs are made of galvanized iron, and painted afterwards.

Green's Patent Lawn Tennis Court Marker.

PRICES.

	£	s.	d.
With one wheel, suitable for ordinary courts ...	14	0	0
With three wheels ...	17	0	0
Large size, for clubs, with three wheels ...	20	0	0

The novel features of this machine are the simplicity of its design and construction, and the easy manner in which it works when marking out the court. The trough is so constructed that the periphery of the front or marking wheel, which is turned true on the edges and face, and works in India-rubber fittings, enters it, and in its revolving motion gathers up the liquid and conveys it to the ground *direct* for marking purposes without the assistance of an intermediate roller; it therefore secures a whiter line; and when the machine is at rest the trough remains slightly tilted, so that the liquid flows to the back part, and being easily mixed, is thus ready for future use.

The "Invincible" Lawn Mower (SAMUEL EDWARDS' PATENT).
First Prize, GOLD MEDAL, at the National Lawn Mower Contest, Birmingham. For sizes 6, 7, 8, and 9-inch, wood handle. These sizes are also supplied with two handles when required.

18-in.—A stronger machine than the above	7	10	0
20-in.—This is a splendid machine for general mowing. It has three driving-rollers, which makes it easy to turn, without injuring the turf. It can be worked on a level lawn by two men; or, if worked with a pony, it will cut grass from four to six inches long, on any sort of ground	8	10	0
24-in.—A larger machine than the above, and very easy to work, similar in principle	9	10	0

Grass Box included.

A stronger draw-bar for a pony can be supplied with 20-in. and 24-in. Mowers—10s. 6d. each extra.

**The "Invincible" Lawn Mower (SAMUEL EDWARDS' PATENT),
FOR PONY AND HORSE POWER**

Every system of lawn mowing can be accomplished with the above machines, and the mowing is well done.

No ribbing of the lawn. Will really cut wet grass.

Grass can be cut from half-inch to six inches high.

Has a side-delivery by means of a lever.

Grass can be scattered on the lawn if desired.

No pressure on the grass before cutting.

The wood regulating rollers can be placed either at the front or back of the revolving cutters, whichever is desired.

The "Invincible" is a thoroughly well-made substantial English machine; has been severely tested, and gained the First Prize in all the real competitions since its introduction into the market, which we challenge any maker to dispute.

Samuel Edwards' Patent Improved "Victor" Lawn Mower.—

The Grass Box can be placed either behind or in front of the cutters. Light in draught. Simple in construction. Easy to keep in order.

This machine is made on the principle of side driving-wheels or rollers, instead of back driving-rollers, and for a good solid machine, combined with first-class workmanship, we think it will stand unrivalled. It is light in draught, cheap, and good, and will cut any sort of grass. One of the great features in this machine is that the grass collecting box can be placed either in *front* or *behind* the revolving cutters; this arrangement enables the man working the machine to move the box at pleasure.

For instance, when desirous of cutting close to shrubs, trees, or fences, the box can be used behind the cutters, and when mowing a general flat open space, such as a cricket or tennis ground, the box can be placed at the front and has then a tendency to balance the machine.

This is the only Lawn Mower made in which this can be done.

Fletcher's Lawn-Edge Clipper.—This Lawn-Edge Clipper, although a marvel of simplicity, is the most perfect implement yet invented for clipping lawn verges.

This machine supplies a want long felt. In many gardens the work of trimming off the grass blades, which spring from the edge of the sod and overhang the walks and flower beds, has taken actually a longer time than the mowing of the lawns themselves, and yet if it is not done, the garden can never present a well-kept appearance.

Thus once tedious operations can now be speedily and pleasantly performed by the above machine, which is so light that a child may push it, and so simple that it cannot get out of order.

You place the roller or wheel upon the grass, close to the edge, and allow the projecting blade to come down the edge of the sod, when the lever meets the walk or flower-bed, then take the handle and push the machine before you, and it will cut off all the grass which projects, and give a very clean shave. It will cut curved borders, and even sharp angles can be managed with it.

Some of the Special Advantages of this Lawn-Edge Clipper.

The cut, being effected by a circular or rollers blade acting upon another blade, does not consist of a series of cuts, as in the case of shears, but of one single long cut from the beginning to the end of the border, so that a jagged cut, such as shears sometimes make, is impossible with the perfection here left by this implement. No stooping as with shears, nor complicated machinery, the whole thing being perfectly simple. If dulled by use, or by cutting through soil, it is easily sharpened again.

The "Simplex," No. 1, is the smallest, lightest, cheapest, and most simple Edge Clipper ever produced, and it works thoroughly well and very quickly. It is specially recommended for ornamental and all other lawns. The "Simplex," No. 2, is of the same make exactly as No. 1, but is larger and heavier, being especially designed for long stretches of borders, avenues, carriage drives, &c.

REMOVING PESTS.—No. 1. "Simplex" Edge Clipper (the smaller size) £1 10s.
No. 2. " " " (the larger size) £2 0s.

Improved Fumigator,

FOR DESTROYING INSECTS ON PLANTS, &c.

The simplicity of this little machine is a principal feature, and will recommend it to the attention of those who require an economical way of destroying insects on plants, &c. It is neat and durable, and will effect a considerable saving in tobacco paper, besides requiring only about one-tenth part of the time usually occupied in fumigating. No risk of scorching the plants, for if the Fumigator be placed a few inches from them no heat can reach them. If desired, the operator can be outside the greenhouse and place the pipe into any opening in the side of the greenhouse, thus preventing any annoyance from smoke. Price 10s.

The Patent "Manchester" Lawn Mower continues to command a large sale, nevertheless many inferior imitations which do not consist in a perfect mower as arranged in a perfect manner. It still remains the cheapest and most effective machine of its class, cutting with the least expenditure of power other long or short grass on level or uneven ground, and mowing in any direction, with or without the aid of a man. It is put together well, and is so simple, with ordinary care, to put out of order, and in re-adjusting requires no skill at the kind in the market at the same price. The mowing is based on; the wearing parts are interchangeable. The handle adapts itself to the height of the sward, and the position of the operator and the position of the wheels and gears, and both to mow and to cut. It is usually supplied with three blades for the front or hand wheels, but in dry and hot weather they may be dispensed with, and the cuttings may be recovered as the lawn with coverings.

Messrs. Follows & Bate's Patent Lawn Mowers.
The "TENNIS." For the Tennis Ground, small Grass Plots, and for Gardeners.

The New "Tennis" Lawn Mower is a strongly made and durable geared machine, very light in draught, of excellent design, superior finish, and fitted throughout with modern adjustments. The cylinder is driven by machine-cut wheels running with the greatest accuracy and at such a speed as to ensure a beautifully smooth and velvet-like appearance on the lawn.

The roller behind the revolving knives serves to remove inequalities of the ground, and answers the purpose of a garden roller.

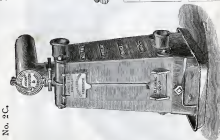

The gearing is neatly covered in on both side of the machine, as illustrated.

The New "Tennis" Lawn Mower is the small sizes is eminently suited for verges, ornamental gardening, or for young ladies to use on the Tennis Ground, whilst the larger sizes will be found all that can be desired for more extensive work. A considerable number have been sold, and are giving the greatest satisfaction.

PRICES.—(Complete with Grass Boxes.) No charge is made for packing.

Keith's Patent Boilers for Hot Water Heating.

No. 2C.
Boiler.

No. 1C.

"C" sizes.—Keith's Patent C size Boilers are the most compact and perfect cheap small Hot Water Boilers in use, being very powerful for their size, and most economical in fuel. Like all Keith's other Boilers, they stand complete in themselves, requiring no brick setting or building work round them, and being wholly unobscured by water-curtain outside, there is no risk from fire by their use. These Boilers are capable of holding a large body of fluid, consequently would be either for sale or hire, and can be made in any form, and can be raised, hoisted, or lowered, if necessary.

SIZES AND PRICES, &c.

	Price.
No. 2C Boiler, Complete, only made with 3-in. Sections and as shown	£ 1 4
No. 1C Boiler, Complete, as shown, with 3-in. or 2 1/2 in. Sections	5 10 0
48 inches wide	5 10 0
No. 2C Boiler, Complete as shown, with 3-in. of 3-in. Sections to either side	10 10 0

Weights.	Height from Floor Level to Centre of Flow Boiler.	Space occupied on Floor.	Will Run.
No. 2C .. 14 cwt	3 ft. 6 in.	18 in. by 12 in.	20 ft. of 1-in. Pipe
No. 1C .. 3 cwt	5 ft. 6 in.	24 in. by 18 in.	100 ft. of 1-in. Pipe
No. 2C .. 6 cwt	6 ft. 7 in.	3 ft. by 2 ft.	500 ft. of 1-in. Pipe

No. 1C and No. 2C Boilers can be made with Radii (up for small areas) pipes across instead of with Sections; please state, when ordering, whether a Vertical or Horizontal Pattern Air Register Radii Pipe is required.

No. 18.—Keith's Patent Sectional "Challenge" Boilers, for Hot Water Heating. These Boilers can be made higher or to any special height to order, to suit requirements.

No. 170.—Very cheap and useful Hot Water Apparatus, specially introduced for small greenhouses, porch conservatories, &c. The Stove is fitted with patent sliding tank, having one 3-inch burner, and will burn for about 20 hours with once filling. The Stove and cast-iron mounts are black japanned, and the boiler tubes and uprights are enamelled green or terra-cotta. Total height, 22 inches; length, 44 inches; diameter of pipes, 2½ inches. Price, 25/- Cottons, 5/8 per box.

No. 171.—Larger and more powerful Hot Water Apparatus, the Stove of which is fitted with patent sliding tank, having two 3-inch burners, and will burn for about 18 hours with once filling. The boiler is of special tubular construction, and in practical use has given a better result than ever before attained. The Stove is fixed to the boiler by two screws, and as the boiler is fitted with eight holes on both sides it can readily be reversed and made either right or left handed as desired. The Stove and cast-iron mounts are black japanned, and the boiler tubes and uprights enamelled green or terra-cotta. Total height, 2 ft. 2 in.; total length, 5 ft. 9 in.; diameter of pipes, 2½ inches. Price 45/- Cottons, 1/6 per box. This apparatus can be supplied with copper boiler if preferred, at a cost of 16/8 extra.

No. 172.—Improved—This is a very compact and useful apparatus, and has been much improved. The uprights are fitted with cast-iron feet, mounts, &c. The Stove is fitted with patent sliding tank, having two 3-inch burners, and will burn about 18 hours with once filling. The boiler, tubes, and uprights are enamelled green or terra-cotta, the Stove and cast-iron mounts being black japanned. Total height, 27 inches; length, 46 inches; diameter of pipes, 2½ inches. Price 42/6. Cottons, 1/6 per box.

Heating by Hot Water.

Hot Water Pipes and Apparatus have long been acknowledged as the very best means of warming Greenhouses and Conservatories, but the great cost and expense almost prohibits their use except in cases of large houses, and where a gardener or man is in constant attendance to use after them. For small Greenhouses, such as are many a amateur's delight, there has long been felt the want of some cheap and effective apparatus that would satisfactorily warm them during the cold weather and so save the plants from frost and keep the Greenhouses bright with flowers during the winter months.

We have for some time given considerable attention to the subject of heating these small Greenhouses most efficiently, and at the same time as economically as possible, and think we have satisfactorily solved the problem by the introduction of these Patent Hot Water Apparatuses.

They are perfectly free from smoke or odor of any kind, are quite portable, and can be placed in the most convenient position in the house, and at any time readily removed if required to a more convenient situation. They do not require any chimneys, flues, or fumes, are perfectly safe, and are so simple in operation that they can, if necessary, be worked by a child.

The pipes and boilers are filled with water, which becomes rapidly heated by the Stove, and circulates constantly through the apparatus, giving off its heat by radiation.

The management of the Stove is just as simple as that of an ordinary table lamp. After being cleaned and lit they require no more attention for lightness or tenuity hours. The heat obtained from them is quite free from any injurious vapors, and will not in any way harm either vegetable or animal life, as the circulation of the Stove is so perfect that no fumes of any kind are emitted. A moist heat can readily be obtained, if desired, by simply removing the cap through which the boiler and taps are filled.

No. 172.—Similar apparatus to No. 171, but much larger and more powerful. The stove is fitted with patent sliding tank, having two 3-inch improved moveable burners, and will burn for about 20 hours with once filling. The boiler is of special tubular construction, and in practical test has given a better result than ever before attained. The stove is fixed to the boiler by two screws, and as the boiler is fitted with eight hole on both sides, it can readily be reversed and made either right or left handed as desired. The stove and cast-iron mounts are black japanned, the boiler tubes and uprights being enamelled green or terra-cotta.

Total height, 2 ft. 9 in.; length, 6 ft. 10 in.; diameter of pipes, 2½ in. Price 70/- This apparatus can be supplied with copper boiler, if preferred, at a cost of 14/- extra. Cistons, 3/6 per box.

No. 180a.—A very powerful and useful Hot Water Apparatus. The boiler, tubes, and upright-end supports are all made of best terra-coated iron, japanned green or terra-cotta, with black mountings, and are fitted with substantial cast-iron tops and bases to the end supports, and brass tap to draw off water. The stove is made of best sheet iron, black japanned, with ornamental cast-iron base, and fitted with patent sliding tank, two 4½-inch improved moveable burners, and will burn for about 15 hours with once filling. It is complete with brass unions, cast-iron spanner, &c. Total length, 6 ft. 4 in.; diameter of tubes, 2½ in.; total height, 2 ft. 9 in.; size of pillars, 4 inches by 3 inches. Price £4 10/-.

This apparatus can also be had with copper boiler, price 40/- extra. Cistons, 3/9 per box.

The heat from these hot water apparatuses is uniform and completely under control, and it has the advantage of being more evenly distributed than the heat obtained from an ordinary stove, which is sometimes very local in character.

They are manufactured of the best soft-coated iron plates, which is the best material possible except copper, and is much superior to galvanised iron. They are all carefully tested, and warranted sound, finished in the best manner, and, being enamelled green or terra-cotta with black mounts, have a very neat and attractive appearance.

In conclusion, we may state that it is almost impossible for them to get out of order, and they will heat small greenhouses as thoroughly and efficiently as the most costly and complicated hot water system.
